

HARRY DEAN RUSSELL

Aberdeen, Scotland | 07398 530978 | harryrussell081203@gmail.com

PROFESSIONAL SUMMARY

Engineering technician, currently testing, repairing and moulding subsea cables and connectors - fault-finding to component and joint level, and potting assemblies in epoxy resin and polyurethane to marine sealing standards. Three years before that building, testing and fault-finding precision subsea electronics at Sonardyne to IPC-A-610 Class 3, and two years running secure communications and networks in the Royal Navy aboard a frontline Type 23 frigate. Time-served via a completed Engineering Modern Apprenticeship (SCQF Level 7), with first-year BEng (Hons) study in Instrumentation, Measurement & Control. Used to safety-critical kit, hard deadlines and environments where a fault has to be found and fixed with nobody else to call. Looking for a hands-on technical role with travel, across engineering, instrumentation, electronics, field service or communications.

CERTIFICATIONS

- IPC-A-610 Class 3 — high-reliability electronic assembly standard
- Engineering Modern Apprenticeship, SCQF Level 7 — Asset Lifecycle & Maintenance (Tullos Training / Sonardyne)
- Counterbalance forklift operator licence
- First Aid Level 2 | Basic Sea Survival | NMT 103 Rifle Qualification | Leadership Award

WORK EXPERIENCE

Technician | Hydro Group | 2026 – Present

- Test and repair subsea cables, connectors and terminations, fault-finding to component and joint level.
- Mould and pot cable assemblies and connectors using epoxy resin, polyurethane and related compounds to marine sealing standards.

Workshop Technician | Sonardyne International | 2023 – 2026

- Assembled, tested and fault-found subsea acoustic positioning systems across the Ranger 2, Mini-Ranger, Solstice, USBL and Compatt product lines.
- Worked to IPC-A-610 Class 3, the high-reliability standard for equipment where field failure is not recoverable.
- Carried out component-level diagnosis and repair on complex electronic assemblies and proprietary hardware.
- Produced and maintained technical documentation and test records supporting quality control and traceability.
- Worked directly with senior engineers on technical compliance and pre-deployment sign-off.

Communications & Information Specialist | Royal Navy — HMS Westminster | 2021 – 2023

- Operated as an online network engineer aboard a frontline Type 23 frigate, maintaining secure and non-secure communications between sea-going and shore units.
- Administered specialist communications and IT equipment, including classified information and cryptographic material, to guarantee operational capability for command.
- Held personal responsibility for safety-critical equipment and Top Secret cryptographic material.
- Diagnosed and resolved complex system faults at sea with no external support available.

Line Cook | McDonald's | 2020 – 2021

- First job at 17: high-volume kitchen work to strict hygiene and quality standards, holding pace through peak service.

ENTREPRENEURIAL ACTIVITY

Founder | Leads2Profit | 2024 – Present

- Built and operate a revenue systems business serving nightlife and events venues.
- Design and deploy end-to-end marketing infrastructure: paid traffic, customer capture, automated retention and repeat revenue pipelines.
- Practical working knowledge of automation platforms (n8n, Make, Zapier), AI tooling, Meta Ads and CRM systems.

EDUCATION

BEng (Hons) Engineering: Instrumentation, Measurement & Control — Robert Gordon University

Year 1 completed via Graduate Apprenticeship route.

SQA Diploma in Engineering | NC Electrical Engineering (SCQF Level 6) | SVQ Level 2 Performing Engineering Operations

Tullos Training / Sonardyne.

Scottish Highers, 2021

English A | Geography B | Physical Education B

National 5

English B | Maths C | PE A | Geography B | Drama A | Chemistry C

KEY SKILLS

- Electronic assembly, testing and workshop maintenance to IPC-A-610 Class 3
- Fault diagnosis, component-level repair and technical documentation
- Secure radio and network communications systems; signal procedures and comms protocols
- AutoCAD; instrumentation and control fundamentals; sheet metal design principles
- Operational discipline and composure under pressure; shift and deployed working
- Systems thinking, process design, automation and AI tooling
